SUMMARY

Data Analyst and AI & Data Science undergraduate with hands-on experience in Power BI, SQL, Excel, and Python. Skilled in building business intelligence solutions using semantic data modeling, DAX, Power Query, and interactive dashboards to transform data into actionable business insights.

SKILLS

Power BI, Tableau, SQL (MySQL), Excel, Python, DAX, Power Query, Data Modeling, Star Schema, Business Intelligence, Data Analysis, Data Visualization, KPI Dashboard Development, Data Cleaning, Pandas, NumPy, Business Communication, Scikit-learn, SHAP, Streamlit, Git, GitHub

PROJECTS

Project VELOX – End-to-End Business Intelligence Platform [GitHub Repository](#)

Designed and developed a 5-page executive Power BI solution delivering business intelligence across Executive, Operations, Customer, Restaurant, and Financial Intelligence using a unified semantic model.

Engineered 150+ reusable DAX measures including executive KPIs, dynamic scoring models, time intelligence, alert engines, drill-through tooltips, and conditional formatting to support business decision-making.

Developed interactive dashboards featuring dynamic KPI scoring, cross-filter analytics, custom risk matrices, executive alert strips, and contextual tooltips to enable data-driven operational and strategic decisions.

Designed a star schema semantic model with reusable measures, Power Query transformations, and performance-optimized calculations for scalable business analytics.

AI-Powered Customer Retention Intelligence System [Live Demo](#) | [Github Repository](#)

Developed an end-to-end customer churn prediction system using classification algorithms and machine learning techniques.

Performed data preprocessing, feature engineering, and exploratory data analysis to improve model performance.

Trained and evaluated Logistic Regression, Random Forest, and XGBoost models using ROC-AUC and F1-score.

Applied SHAP for model interpretability and deployed the solution using Streamlit for real-time predictions.

EXPERIENCE

Finance Intern – Yodaplus Technologies Pvt. Ltd. | Mumbai, India

Developed AI-powered financial analysis workflows using the CrewAI multi-agent framework and optimized prompts across FMCG, IT, Logistics, Pharma, Energy, and Manufacturing domains. Designed and optimized multi-agent workflows by defining task logic, prompts, and expected outputs to improve response quality.

Adapted AI solutions for US and Indian financial markets to deliver domain-specific financial insights.

Supported AI product development through workflow optimization and business communication.

Technical Highlights

Solved 106+ SQL problems covering joins, subqueries, CTEs, and window functions. Passionate about building Business Intelligence solutions that transform data into actionable business insights.

EDUCATION

Bachelor of Engineering (Artificial Intelligence & Data Science)

KJSIT, Mumbai | CGPA: 8.99/10 | Expected Graduation: 2027

Honours in Blockchain Technology | Expected Completion: 2027

CERTIFICATIONS

Deloitte Australia Data Analytics Job Simulation • Data Analyst – Big 4 Ready • Data Analyst – Skill Certification • Power BI Workshop • Git & GitHub • Linux Fundamentals • CrewAI
